Senior Software Engineer · React, Next.js, TypeScript, Node.js, PostgreSQL · 3.5 yrs

Education

Vidyavardhini's College of Engineering and Technology *2019 – 2023*
B.E. Information Technology *CGPA 8.65*

Experience

Oren *Oct 2022 – Present*

Senior Software Engineer *Apr 2025 – Present*

- Own end-to-end delivery across the OSH ESG reporting stack — BRSR frameworks, Scope 3 emissions, dashboards, and supplier portals.
- Extended the Scope 3 emissions module with new Fuel & Energy (C3) and Waste (C5) categories — data model, calculation logic, and bulk-upload ingestion pipelines for historical data.
- Designed and shipped a per-account USD token-billing system (configurable limits across prod and demo tenants) and re-architected air-emission settings from company-wide to year-wise — both feeding customer-facing admin tooling.
- Replaced a brittle 2-step Excel sales-dashboard pipeline with a direct Zoho API integration and rebuilt the monthly Data Status Report cron for automated personalized email delivery.
- Built custom Claude Code skills and AI agents that automate the team's ticket-to-PR development workflow — planning, implementation scaffolding, Cypress E2E test generation, and automated PR review.

Software Engineer *Jun 2023 – Mar 2025*

- Delivered across frontend, backend, and database layers on a Next.js / Node.js / tRPC / Prisma / PostgreSQL / Redis stack — touching 10+ product modules (Reports, Assessments, Goals, Dashboards, Settings, Supplier & Auditor portals).
- Built the ESG Dashboard module from scratch end-to-end — interactive Environment / Social / Governance visualizations, Executive views, and drill-down supplier analytics powering daily workflows for sustainability officers.
- Cut a core report workflow's render time from **~10–15s to under 1s** — split one over-fetching API into targeted endpoints, added indexed access paths, and virtualized + progressively rendered the frontend.
- Designed and deployed the automated PDF report pipeline — cron job + server-side PDF generation + email delivery — replacing manual weekly report exports for every customer tenant.
- Architected a reusable, responsive component library that became the foundation of the product UI revamp, enforcing visual consistency across 15+ pages.

Software Engineer Intern *Oct 2022 – May 2023*

- Foundations: shipped reusable React components, designed CRUD tRPC APIs against Prisma/PostgreSQL, and fixed production bugs across the early OSH product.

Omikron Technologies *Jun 2022 – Sep 2022*
Software Developer Intern

- Built frontend + backend features across an internal software product (full-stack JavaScript).

HireQuotient *Jan 2022 – Apr 2022*
Full Stack Developer Intern

- Debugged and resolved frontend/backend defects on a hiring-platform codebase, contributing to quality and stability.

Technical Skills

Languages: TypeScript, JavaScript, Python, SQL, HTML, CSS
Frontend: React, Next.js (Pages Router), React Native, Jotai, Tailwind CSS, shadcn/ui, responsive / mobile-first UI
Backend: Node.js, Express, tRPC, REST APIs, Redis, cron schedulers, server-side PDF rendering
Databases & ORM: PostgreSQL, MongoDB, Prisma, DBeaver
Cloud & DevOps: Azure, AWS, Git, GitHub, CI/CD (npm build pipelines), Cypress E2E, unit testing
Practices: Agile / sprint delivery, code review, AI-assisted development (Claude Code skills & agents)

Projects

Slack & Microsoft Teams Bot ↔ WebMethods.io *Node.js, Python, Tesseract OCR, OpenAI* *2023*

- Co-built custom webhooks integrating Slack and Microsoft Teams with WebMethods.io (Software AG).
- Implemented Tesseract OCR for image-to-text extraction enabling contextual chatbot responses.
- Deployed an OpenAI-powered query-resolution bot, streamlining cross-platform automation workflows.

Yatagram — College Social Media Web App *MERN, JWT, Cloudinary* *2022*

- MERN-stack social platform for college students with JWT auth and Cloudinary media storage.
- Built an admin panel for event management and deployed to the college server.
- Live: yatagram-6fe2f.web.app
