EDUCATION

Vidyavardhini's College of Engineering and Technology
B.E. Information Technology

2019 - 2023
CGPA 8.65

EXPERIENCE

Oren

Apr 2025 - Present

Senior Software Engineer

- Own end-to-end delivery across the OSH platform's ESG reporting stack (BRSR frameworks, Scope 3 emissions, dashboards, supplier portals) - shipped **250+ tickets** at Senior level with a **93% close rate**, including **70+ High/Highest-priority** production items.
- Led the Scope 3 emissions module migration (C3 Fuel & Energy, C5 Waste, bulk-upload pipelines), re-architecting legacy schemas and authoring cleanup scripts that repaired thousands of broken historical records without downtime.
- Designed and shipped a per-account USD token-billing system (configurable limits across prod and demo tenants) and re-architected air-emission settings from company-wide to year-wise - both feeding directly into customer-facing admin tooling.
- Replaced a brittle 2-step Excel sales-dashboard pipeline with a direct Zoho API integration, and rebuilt the monthly Data Status Report cron to auto-deliver personalized emails to every BU collaborator - eliminating recurring manual ops work.

Oren

Jun 2023 - Mar 2025

Software Engineer

- Shipped **500+ Jira tickets** across frontend, backend, and database layers on a Next.js / Node.js / tRPC / Prisma / PostgreSQL / Azure stack - touching **10+ product modules** (Reports, Assessments, Goals, Dashboards, Settings, Supplier portals, Auditor portal).
- Built the ESG Dashboard module from scratch end-to-end - Next.js + tRPC + Prisma + PostgreSQL - delivering interactive Environment / Social / Governance visualizations, Executive views, and drill-down supplier analytics powering daily workflows for sustainability officers.
- Cut report-data API latency by **75%** through query restructuring, indexed access paths, and tRPC payload shaping - turning a sluggish primary workflow into sub-second response.
- Designed and deployed the automated PDF report pipeline - cron job + server-side PDF generation + email delivery - replacing manual weekly report exports for every customer tenant.
- Architected a reusable, responsive component library that became the foundation of the product UI revamp, accelerating downstream feature delivery and enforcing visual consistency across 15+ pages.
- Built interactive onboarding guides that reduced new-user time-to-first-value and cut support tickets from onboarding confusion.

Oren

Oct 2022 - May 2023

Software Engineer Intern

- Foundations: shipped reusable React components, designed CRUD tRPC APIs against Prisma/PostgreSQL, and fixed production bugs across the early OSH product.

Omikron Technologies

Jun 2022 - Sep 2022

Software Developer Intern

- Built frontend + backend features across an internal software product (full-stack JavaScript).

HireQuotient

Jan 2022 - Apr 2022

Full Stack Developer Intern

- Debugged and resolved frontend/backend defects on a hiring-platform codebase, contributing to quality and stability.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, SQL, HTML, CSS

Frontend: React, Next.js (Pages Router), React Native, Jotai, Tailwind CSS, shadcn/ui

Backend: Node.js, Express, tRPC, REST APIs, cron schedulers, server-side PDF rendering

Databases & ORM: PostgreSQL, MongoDB, Prisma, DBEaver

Cloud & DevOps: Azure, AWS, Git, GitHub, CI/CD (npm build pipelines), Cypress E2E

PROJECTS

Slack & Microsoft Teams Bot <-> WebMethods.io | Node.js, Python, Tesseract OCR, OpenAI

2023

- Co-built custom webhooks integrating Slack and Microsoft Teams with WebMethods.io (Software AG).
- Implemented Tesseract OCR for image-to-text extraction enabling contextual chatbot responses.
- Deployed an OpenAI-powered query-resolution bot, streamlining cross-platform automation workflows.

Yatagram - College Social Media Web App | MERN, JWT, Cloudinary

2022

- MERN-stack social platform for college students with JWT auth and Cloudinary media storage.
- Built an admin panel for event management and deployed to the college server.
- Live: yatagram-6fe2f.web.app
